

1. Write a program in C to read n number of values in an array and display them in reverse order.
2. Write a program in C to find the sum of all elements of an array.
3. Write a program in C to find the sum of odd and even elements of an array.
4. Write a program in C to find the product of all elements of an array.
5. Write a program in C to find the index of an element.
6. Write a program in C to copy the elements of one array into another array.
7. Write a program in C to find the maximum element in an array.
8. Write a program in C to find the minimum element in an array.
9. Write a program in C to count the total number of duplicate elements in an array.
(Hint: Two loops --> one starting from index – 0 and other starting from index – 1)
10. Write a program in C to find the reverse of an array. You must reverse the array, not just print them in reverse order.
11. Write a program in C to insert an element in an array.
12. Write a program in C to sort the elements in an array in ascending order.
13. Write a program in C to sort the elements in an array in descending order.

YOU MUST USE BOTH ARRAY INDEXING AND POINTERS FOR EACH OF THE CODE
