

Develop a struct named **Student** that stores the following information for a student:

- Student ID
- Student Name
- Credits Completed

The student records are given below:

[1234, "ABC", 32.0]

[5678, "DEF", 35.5]

[9101, "GHI", 36.0]

[1213, "IJK", 33.0]

Write a **C program** to:

1. Store the above data using an array of structures.
2. Identify and print the **ID and Name** of students who:
 - Have completed **more than 35 credits, and**
 - Whose **3rd digit from the last of the ID** is an **even number**.

Note:

The 3rd digit from the last refers to the **hundreds place** of the student ID.
